How To Import And Export Content In WordPress

Tutorial Contents

In this tutorial, you will learn how to import and export content in WordPress using the WordPress Tools menu.

Refer to the following tutorials if you need help with this section:

- [The WordPress Tools Menu](#)

- [The WordPress Dashboard](#)
- [WordPress Posts vs WordPress Pages Explained](#)
- [How To Use The WordPress Media Library](#)

Here are just some of the reasons why you may want to move some or all the content from one WordPress site to another:

- Your site has changed focus or direction and some of its content is no longer relevant, so you decide to set up a new site and transfer content that no longer fits the old site to the new site.
- You acquire a site with a large library of content and decide to merge its content with the content on your existing site.
- You purchase content created and formatted for WordPress from a 3rd-party content provider (e.g. a freelance writer).
- You decide to sell the content on your WordPress site to another party.
- You own multiple WordPress sites, and one site isn't performing well. So, you decide to let the underperforming site go, but you've poured a lot of work and energy into this site and don't want to lose all the content you've created for it.

WordPress lets you easily import and export your site's posts, pages, comments, custom fields, categories, tags, authors, media files, and more from and to other WordPress sites (and even different content management systems) using the built-in 'Import' and 'Export' tools.

Being able to import and export WordPress data has many uses.

For example:

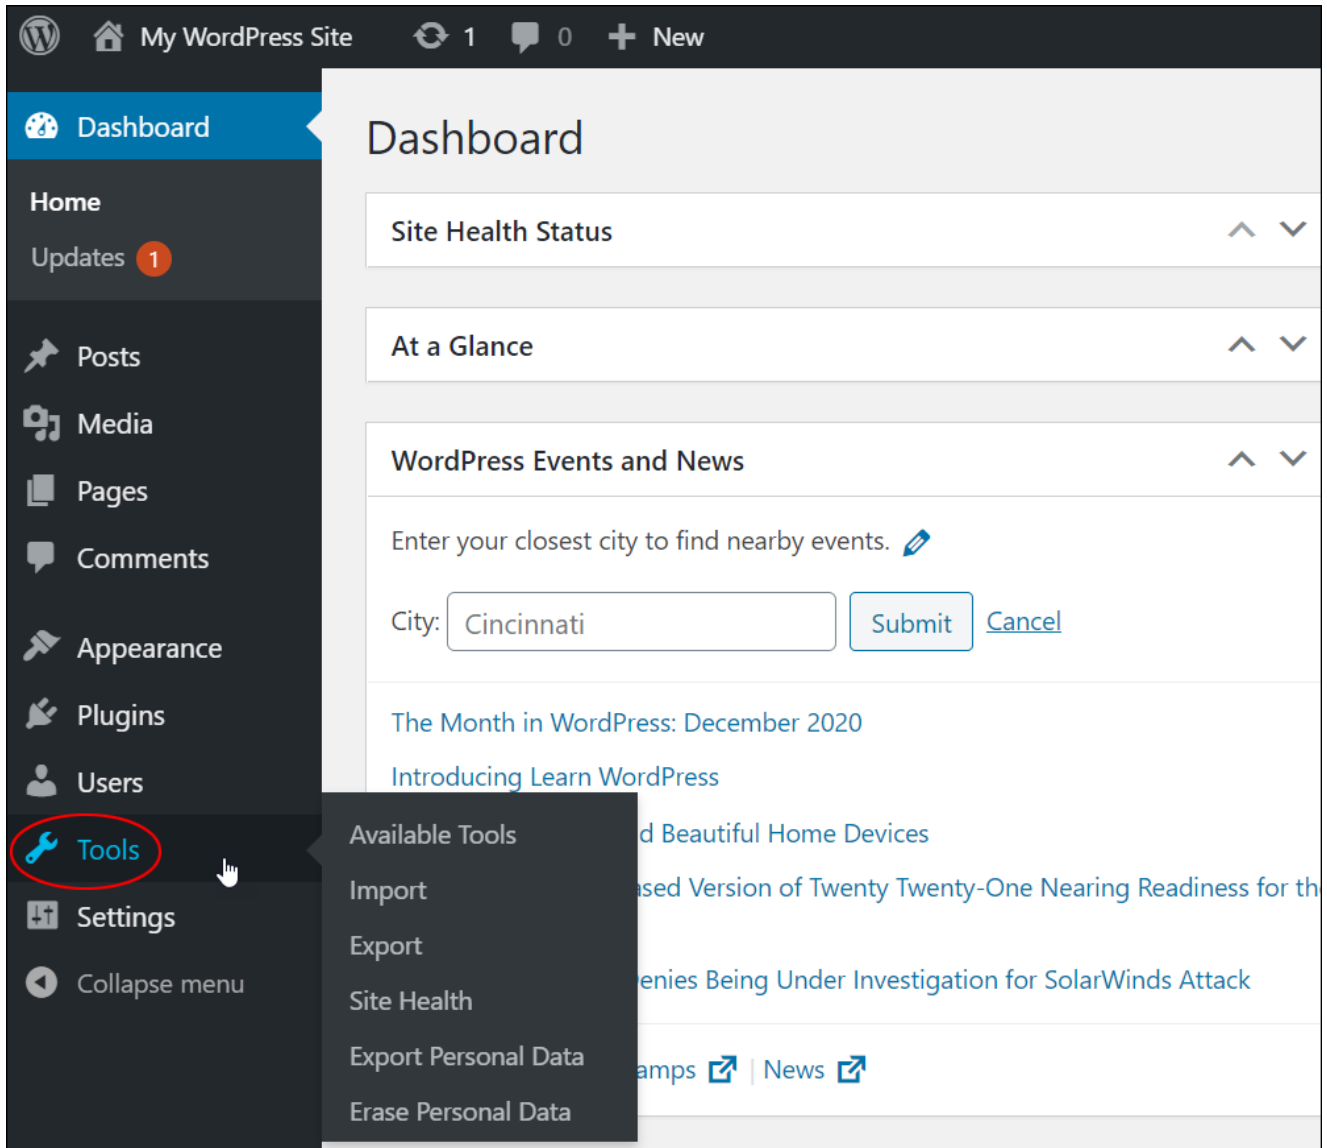

- Making a quick backup of your WordPress content.
- Sharing posts, pages, or other content published on your WordPress site with other WordPress site owners (e.g. affiliates).
- Cloning, duplicating, or distributing content across different WordPress sites from a master site.
- Reimporting content to your existing site (e.g. after reinstalling your site from an old backup file)
- Importing and exporting content from and to other content management systems.

WordPress lets you access useful tools for importing and exporting content in WordPress.

You can access these tools by going to the [WordPress Tools Menu](#) and selecting one of the following:

- [Import](#)

- **Export**

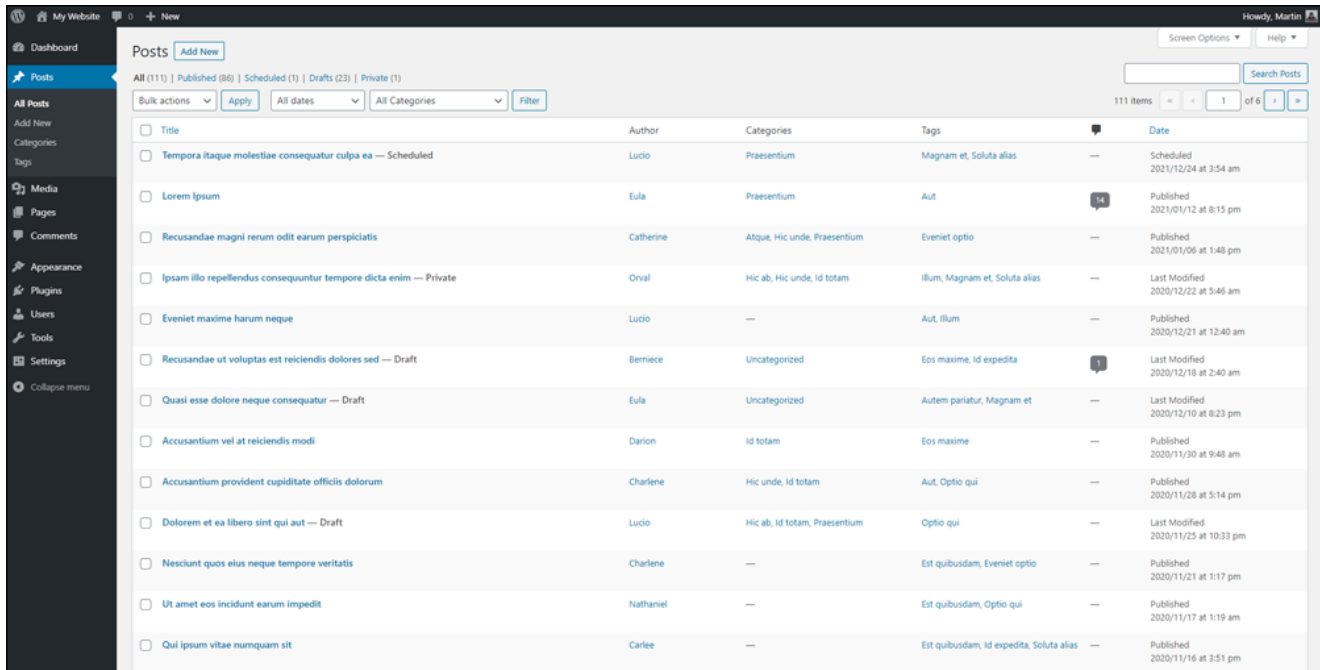

WordPress Tools menu.

Let's go over how to use the Import and Export tools by showing you how to export all or part of a site's content to a data file. We'll then import or reimport this file back into WordPress.

How To Export Content In WordPress

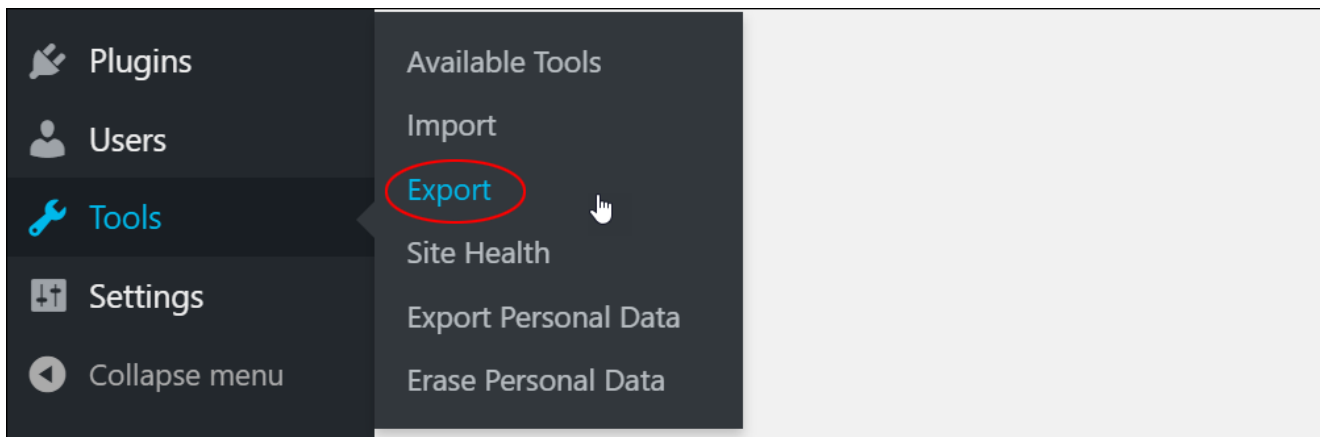

Let's say that you want to export all or just some of your site's content (e.g. to transfer it to another WordPress site).

Let's export all this content.

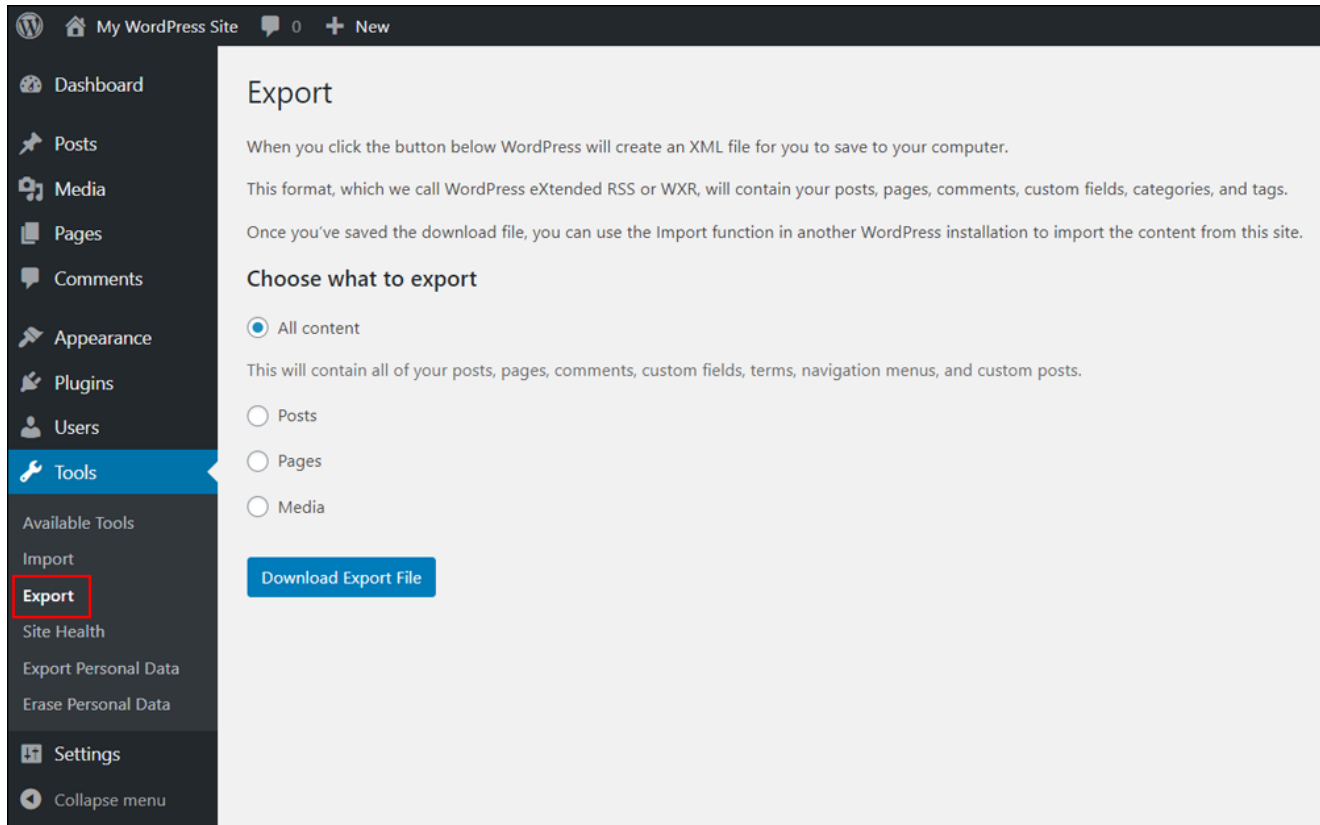

To export content in WordPress:

- Log into your WordPress admin
- Select **Tools > Export** from the main menu.

WordPress Tools menu – Export.

This brings you to the 'Export' screen.

Export screen.

The 'Export' screen lets you export all or some of your content to an export file.

You can use your exported file:

- To keep a backup of your data (note: the Export tool doesn't create a full backup of your site, only of your content).
- To move content from one WordPress site to another.

The **Tools > Export** screen provides several export options:

- **All content** – Export all content, including posts, pages, comments, custom fields, categories, tags, authors, media files, and more.
- **Posts** – Export all or only some posts (filtered by categories, authors, dates, and status).
- **Pages** – Export all or only some pages (filtered by authors, dates, and status).
- **Media** – Export all or only some media (filtered by date).

These options are in the **Choose what to export** section of the Export screen.

You can select **All content** to export all your content...

Export Help ▾

When you click the button below WordPress will create an XML file for you to save to your computer.

This format, which we call WordPress eXtended RSS or WXR, will contain your posts, pages, comments, custom fields, categories, and tags.

Once you've saved the download file, you can use the Import function in another WordPress installation to import the content from this site.

Choose what to export

All content

This will contain all of your posts, pages, comments, custom fields, terms, navigation menus, and custom posts.

Posts

Pages

Media

[Download Export File](#)

Create an export file containing all your content.

Or export only selected content using the Export screen's options and filters.

Choose what to export

All content

This will contain all of your posts, pages, comments, custom fields, terms, navigation menus, and custom posts.

Posts

Categories: ▾

Authors: ▾

Start date: ▾ End date: ▾

Status: ▾

Pages

Media

[Download Export File](#)

Create an export file containing only some of your content.

Depending on the plugins, themes, or custom post types installed on your site (e.g. an eCommerce or Membership plugin), the 'Choose what to export' section of the *Export* screen may display additional types of data that can be exported.

Export

When you click the button below WordPress will create an XML file for you to save to your computer.

This format, which we call WordPress eXtended RSS or WXR, will contain your posts, pages, comments, custom fields, categories, and tags.

Once you've saved the download file, you can use the Import function in another WordPress installation to import the content from this site.

Choose what to export

All content
This will contain all of your posts, pages, comments, custom fields, terms, navigation menus, and custom posts.

Export additional data from plugins and custom post types

Three red arrows originate from the text 'Export additional data from plugins and custom post types' and point to the 'Custom Forms', 'Renewal Payment Retries', and 'Products' radio button options in the 'Choose what to export' section.

Export additional data from plugins and custom post types (e.g. eCommerce product data).

Select an option from the 'Choose what to export' section, then click on the 'Download Export File' button to export your selected content.

For this tutorial, we'll export all content...

Choose what to export

All content

This will contain all of your posts, pages, comments, custom fields, terms, navigation menus, and custom posts.

Posts

Pages

Media

Download Export File

Choose what to export and click the Download Export File button.

This will create a file that you can download and save to your computer or a portable drive.

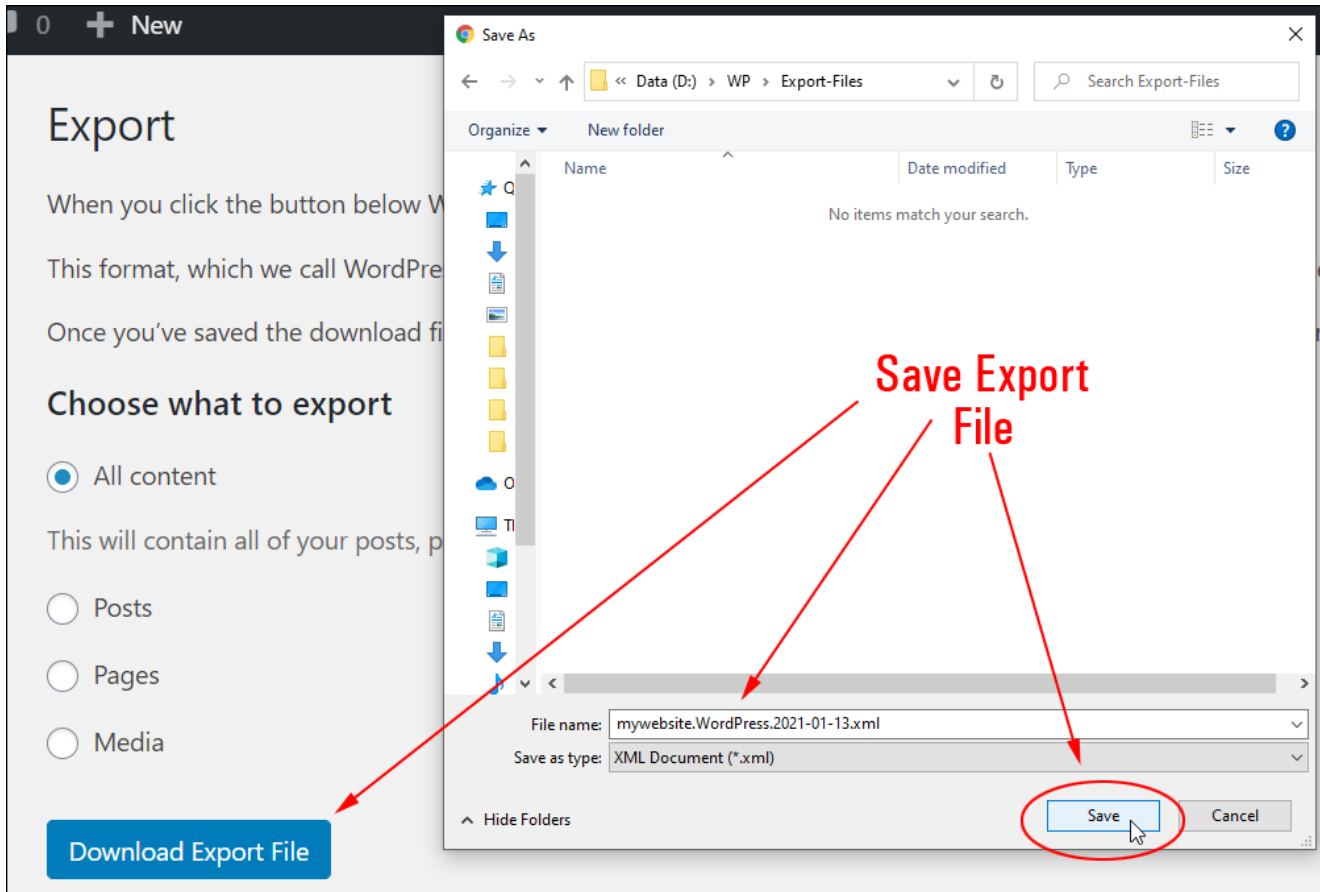

WordPress saves export files in an XML format called *WordPress eXtended RSS* or *WXR*.

Depending on the option you have selected, this export file will contain data about your posts, pages, comments, custom fields, categories, tags, etc.

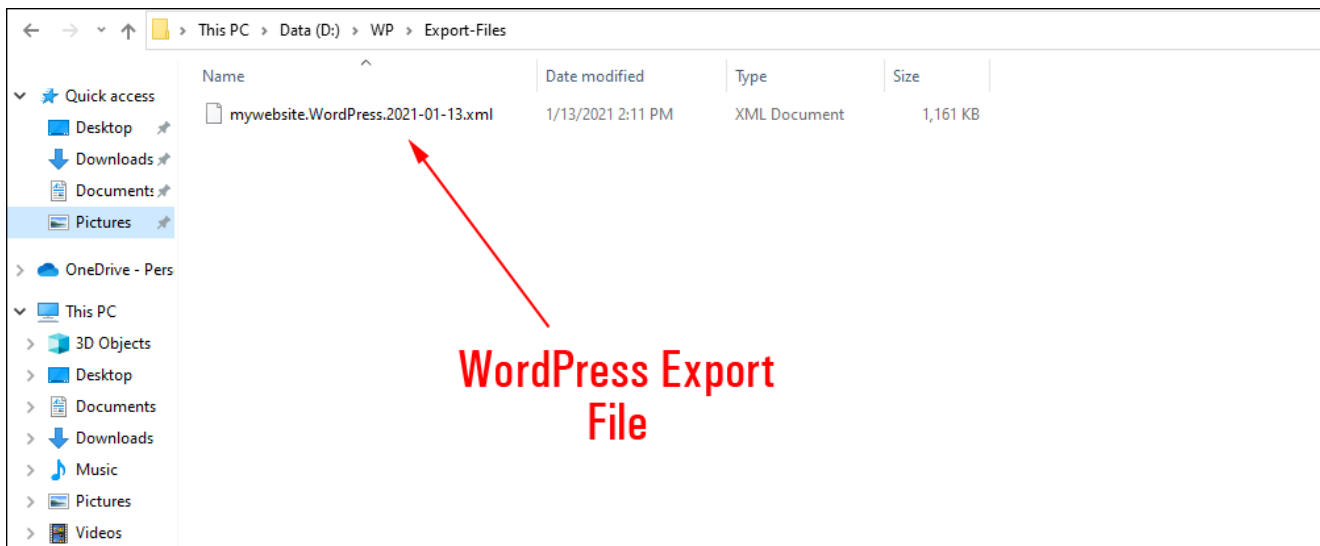

You can rename this file or just save it as is.

Choose where to save your file and click the 'Save' button in the *Save As* window browser that will open after you click the 'Download Export File' button.

Save your exported file.

Your export file will be saved to the specified location (e.g. your hard drive).

Your WordPress export file is now saved in your hard drive folder.

Exporting Content From Posts

If you choose to export content from posts only, you will be presented with the following filtering options:

- **Categories** – Export only posts from a selected category.
- **Authors** – Export only posts from a specific author.
- **Start/End Date** – Export only posts within a selected date period.
- **Status** – Export only posts assigned to a specific status.

To export all your site’s posts, select the ‘Posts’ option, leave all filters as they are, and click on the ‘Download Export File’ button.

The screenshot shows a form titled "Choose what to export". It has three radio button options: "All content", "Posts", and "Media". The "Posts" option is selected and circled in red. A red arrow points from the text "Export Posts" to the "Posts" radio button. Below the radio buttons are several filter dropdown menus: "Categories" (set to "All"), "Authors" (set to "All"), "Start date" (set to "— Select —"), "End date" (set to "January 2020"), and "Status" (set to "All"). At the bottom of the form is a blue button labeled "Download Export File" with a mouse cursor hovering over it.

Export Posts only.

Alternatively, use the filters to narrow down which posts you would like to include in your export file.

For example, you can export only posts that fall within a specific category by selecting a category from the *Categories* drop-down menu.

Choose what to export

All content
This will contain all of your posts, pages, comments, custom fields, terms, navigation menus, and custom posts.

Posts

Categories: 

Authors: 

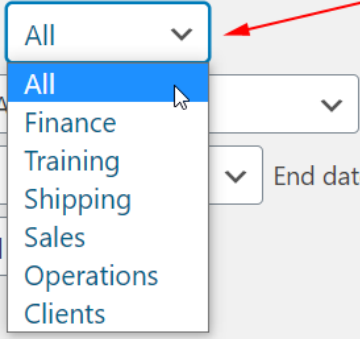

Start date:  End date: 

Status:

Pages

Media

[Download Export File](#)

Export only posts from a selected category.

Similarly, you can use the *Status* drop-down menu to select and only export content from posts assigned to published, scheduled, draft, pending, or private status (with or without additional filtering options).

Choose what to export

All content
This will contain all of your posts, pages, comments, custom fields, terms, navigation menus, and custom posts.

Posts

Categories:

Authors:

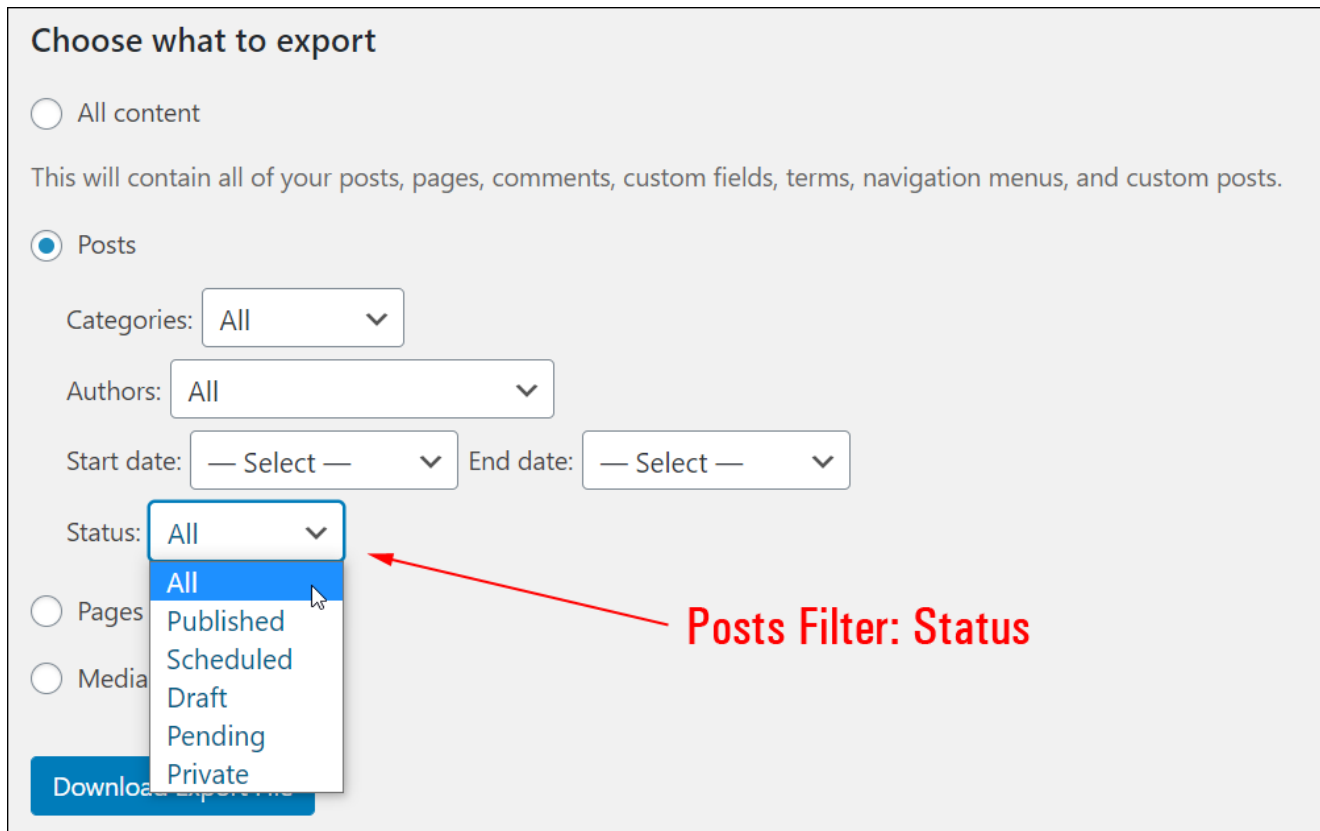

Start date: End date:

Status:

- All
- Published
- Scheduled
- Draft
- Pending
- Private

Pages

Media

Export posts filtered by publishing status.

Combine the filter selections to narrow and refine your Posts' export criteria.

Exporting Content From Pages

Exporting content from *Pages* is like exporting content from *Posts*.

Select the **Pages** option and leave all the menus as their default to export all your site's pages, or use the filters to narrow down which pages you would like to include in your export file:

- **Authors** – Export only pages from a specific author.
- **Start/End Date** – Export only pages within a selected date period.
- **Status** – Export only pages assigned to a specific status.

Click the 'Download Export File' button to create your export file.

Choose what to export

All content
This will contain all of your posts, pages, comments, custom fields, terms, navigation menus, and custom posts.

Posts

Pages **Export Pages**

Authors: ▾

Start date: ▾ End date: ▾

Status: ▾

Media

Download Export File

Export Pages only.

Exporting Media

You can export the content stored in your **Media Library**.

To export only media content from your site, select the 'Media' option in the **Choose what to export** section, and either leave the filters as they are to export all media, or specify a start and end date period to narrow your selection.

Choose what to export

All content
This will contain all of your posts, pages, comments, custom fields, terms, navigation menus, and custom posts.

Download Export File

Export Media only.

Now that you know how to export content from a WordPress site, let's look at how to import (or reimport) your exported data file.

How To Import Content In WordPress

As a precaution, we recommend backing up your WordPress site before importing any data.

Also, if you are trying to import a large file, the import script can run into your site's configured memory limit for PHP, and you will get a "*Fatal error*" message stating that your allowed memory size has been exhausted.

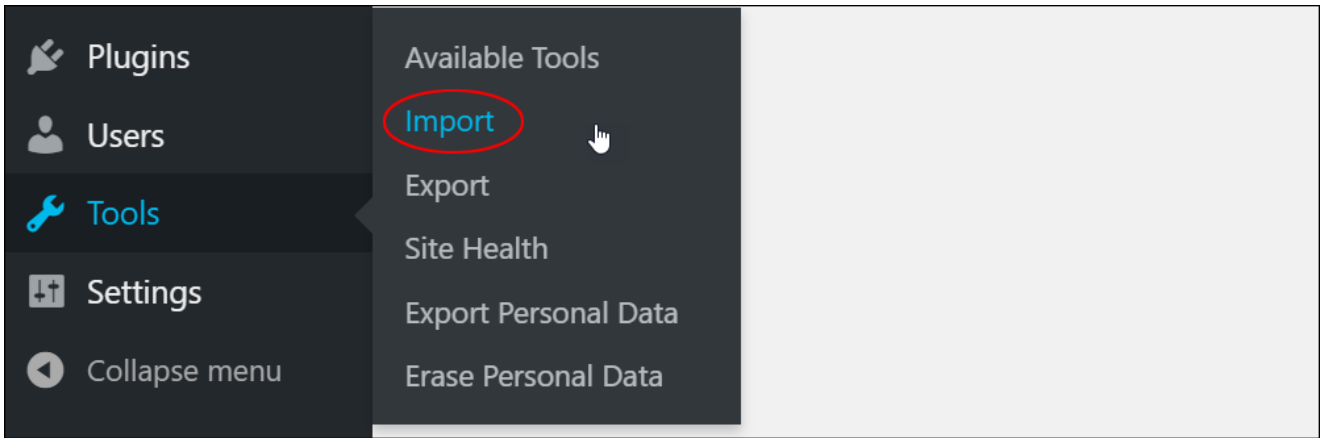

If this happens, ask your web host to manually increase your PHP memory limit and then run the import script again.

For this tutorial, let's import the content from the export file we've just created into a brand new WordPress site.

The screenshot shows the WordPress admin interface. The top navigation bar includes the site name 'My Brand New WordPress Site', a notification count of 0, a '+ New' button, and the user name 'Howdy, Bob'. The left sidebar contains the main menu with 'Posts' selected. The main content area displays the 'Posts' screen with an 'Add New' button. Below the title, there are filters for 'All (1) | Published (1)' and a search bar. A table of posts is shown with columns for Title, Author, Categories, Tags, and Date. The first row shows a post titled 'Hello world!' by 'Bob' in the 'Uncategorized' category, published on 2021/01/13 at 5:23 am. There are bulk action buttons and a 'Filter' button visible.

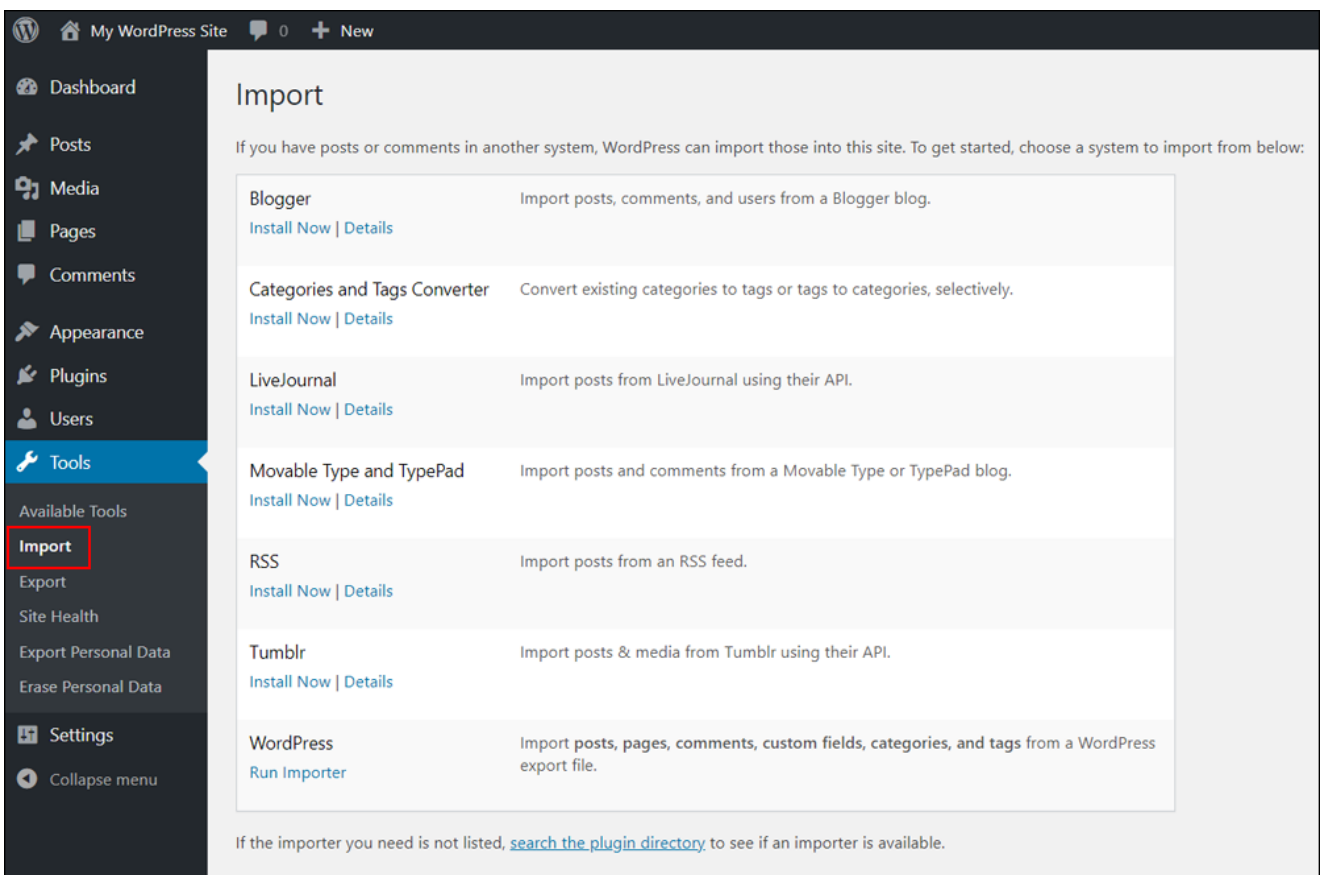

Let's import content into your new WordPress site.

To import content into WordPress, log into your WordPress admin, and select **Tools > Import** from your main menu.

WordPress Tools menu – Import.

This brings up the *Import* screen.

Import screen.

The Import screen lets you import content from other content management systems, RSS feeds, and other WordPress sites into your existing WordPress website.

This section also includes the Categories and Tags Converter tool that was mentioned earlier.

Note: To learn how to import content into your WordPress site from other systems (i.e. not WordPress), refer to the official WordPress documentation here: [WordPress Codex: Importing Content](#)

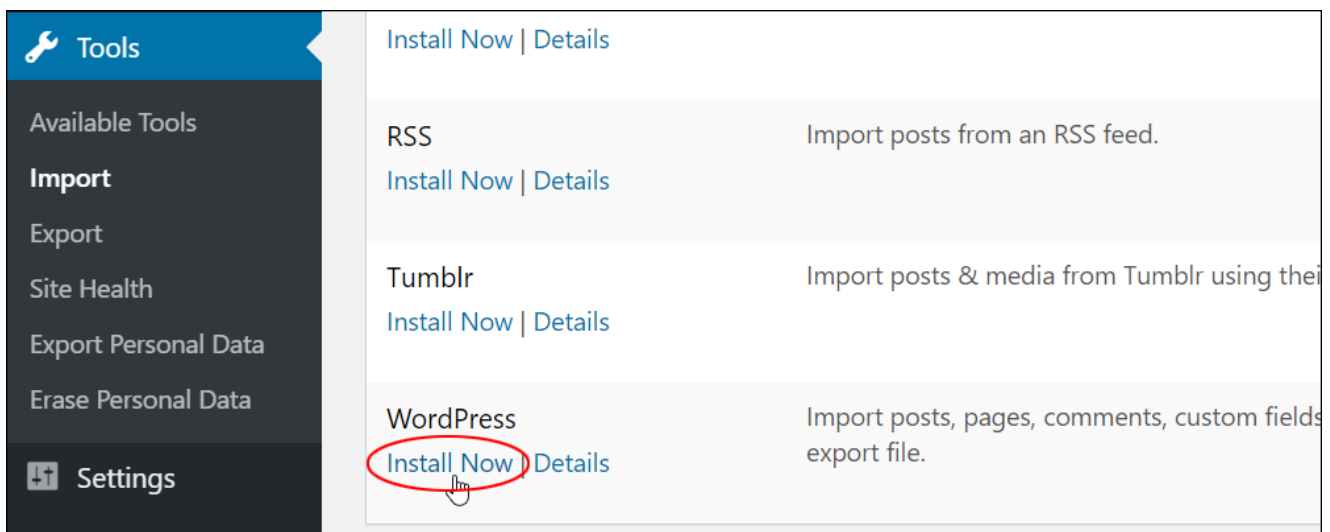

To import content from another WordPress site, choose the **WordPress Importer tool**.

If this is the first time you are importing content using the *WordPress Importer tool*, you will need to install it on your site.

WordPress Importer.

WordPress can automatically install this tool. Locate the **WordPress** option on the *Import* screen and click on **Install Now**.

Click Install Now to install the WordPress importer tool.

Once the tool has been installed successfully, click on **Run importer**.

Import

Importer installed successfully. [Run importer](#)

If you have posts or comments in another system, WordPress can import those into this site. To get started, choose a system to import from below:

Blogger Install Now Details	Import posts, comments, and users from a Blogger blog.
Categories and Tags Converter Install Now Details	Convert existing categories to tags or tags to categories, selectively.

Run the importer tool.

Note: If the WordPress Importer tool is already installed, you can click on the 'Run Importer' link directly from the *Import* screen.

Import

If you have posts or comments in another system, WordPress can import those into this site. To get started, choose a system to import from below:

Blogger Install Now Details	Import posts, comments, and users from a Blogger blog.
Categories and Tags Converter Install Now Details	Convert existing categories to tags or tags to categories, selectively.
LiveJournal Install Now Details	Import posts from LiveJournal using their API.
Movable Type and TypePad Install Now Details	Import posts and comments from a Movable Type or TypePad blog.
RSS Install Now Details	Import posts from an RSS feed.
Tumblr Install Now Details	Import posts & media from Tumblr using their API.
WordPress Run Importer	Import posts, pages, comments, custom fields, categories, and tags from a WordPress export file.

You can run the WordPress Importer tool from the Import screen if it's already installed.

Running the Importer tool brings up the 'Import WordPress' screen.

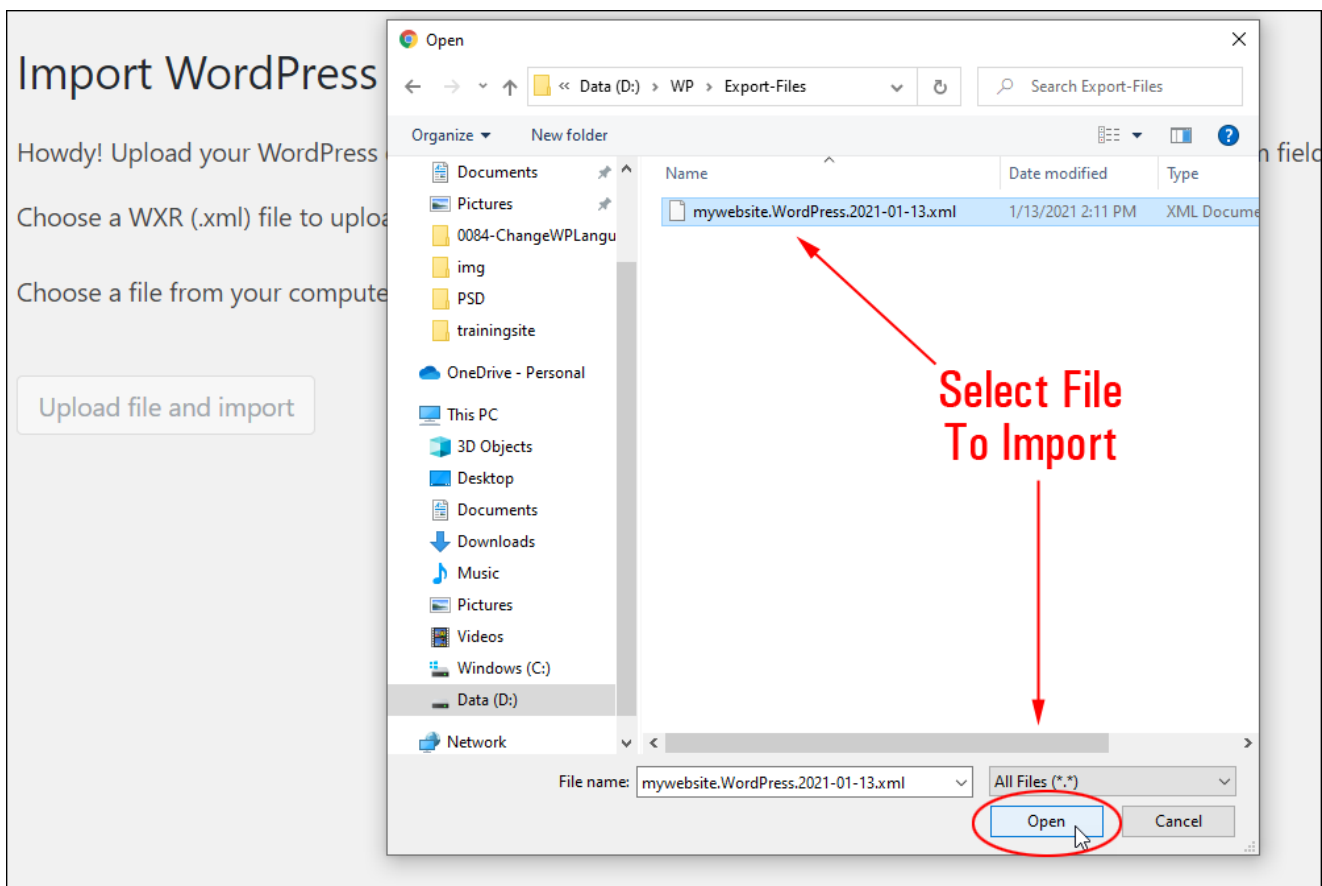

The next step is to choose the WXR (.xml) file you want to import into your site.

Click on the 'Choose File' button.

Click on Choose File.

Locate and select a saved export file and click 'Open'.

Select the file to import.

Once a file has been selected, click on the 'Upload file and import' button to begin importing the content from that file.

Import WordPress

Howdy! Upload your WordPress eXtended RSS (WXR) file and we'll import the posts, pages, comments, custom fields, categories, and tags into this site.

Choose a WXR (.xml) file to upload, then click Upload file and import.

Choose a file from your computer: (Maximum size: 128 MB) mywebsite...21-01-13.xml

**This file will be uploaded
and imported**

Click the button to upload and import your file.

Once the file has been imported, you will be presented with the **Assign Authors** screen and asked to assign an author or authors to your imported content, depending on whether your import file contains a single or multiple authors.

You have the option of:

- **Importing the original author** – If you choose this option, WordPress will:
 - Automatically create a new user using the details from your imported file and assign your posts to this user.
- **Assign content to a new user** – If you choose this option, WordPress will:
 - Create a new user with the login name you enter into the 'create new user with login name' field) and assign your posts to this user.
 - Randomly generate a new password for the new user.
 - Set the new user's role to *subscriber*.
 - You will need to manually change the new user's details if required.
- **Assign imported posts to an existing user** – If you choose this option:
 - You can reassign the author of the imported item to an existing user of this site, such as your primary administrator account to make it simpler for you to edit and save the imported content (you can **change post authors** later), or
 - make sure you have already created the user account you plan to assign your imported content to (if you need help with this step, see our tutorial on **How To Manage WordPress Users**)

Import WordPress

Assign Authors

To make it simpler for you to edit and save the imported content, you may want to reassign the author of the imported item to an existing user of this site, such as your primary administrator account.

If a new user is created by WordPress, a new password will be randomly generated and the new user's role will be set as subscriber. Manually changing the new user's details will be necessary.

1. Import author: **Eula (shemar.jacobi)**
or create new user with login name:
or assign posts to an existing user:
2. Import author: **Martin (Martin)**
or create new user with login name:
or assign posts to an existing user:
3. Import author: **Charlene (nienow.taryn)**
or create new user with login name:
or assign posts to an existing user:
4. Import author: **Orval (hankunding)**
or create new user with login name:
or assign posts to an existing user:
5. Import author: **Roberta (hailee.hill)**
or create new user with login name:
or assign posts to an existing user:

Assign authors to your imported content.

In addition to assigning authors to your imported content, you also have the option to download and import file attachments.

If you want to import things like post images from the import file, then tick the checkbox next to 'Download and import file attachments' before clicking the **Submit** button.

12. Import author: **Berniece (kali.rowe)**
or create new user with login name:
or assign posts to an existing user:
13. Import author: **Catherine (marvin.brandy)**
or create new user with login name:
or assign posts to an existing user:

Import Attachments

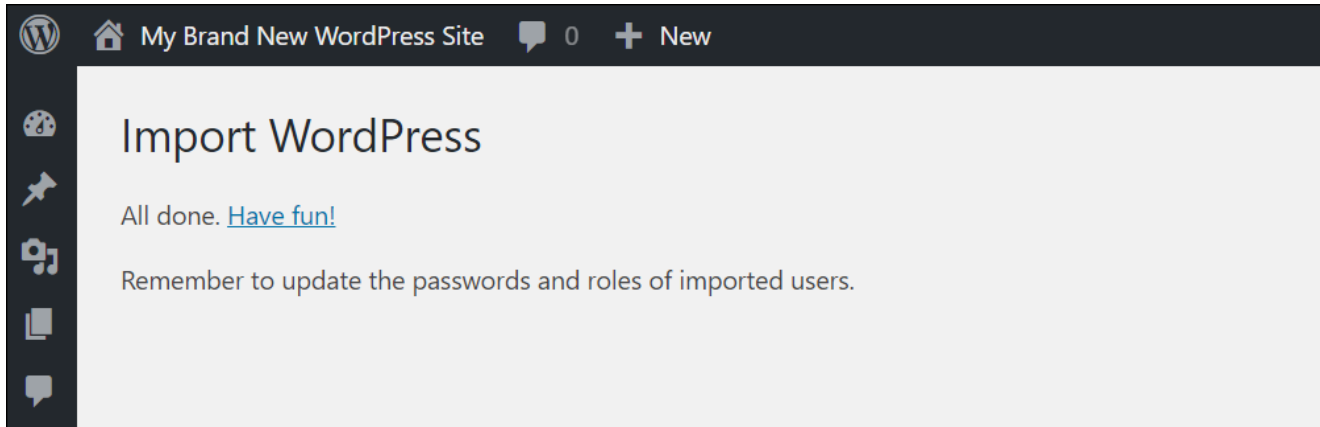

Download and import file attachments

Submit

Import Attachments

Import Attachments.

If there are no issues, all data will be successfully imported, and you will see an “All done. Have fun!” message like the one shown below (and a reminder to update the passwords and roles of imported users).

WordPress content successfully imported.

Occasionally, if you’re reimporting data into an existing WordPress site, you may see a message letting you know that certain users or files already exist.

In this case, WordPress will go through the process and skip importing duplicate (i.e. existing) files.

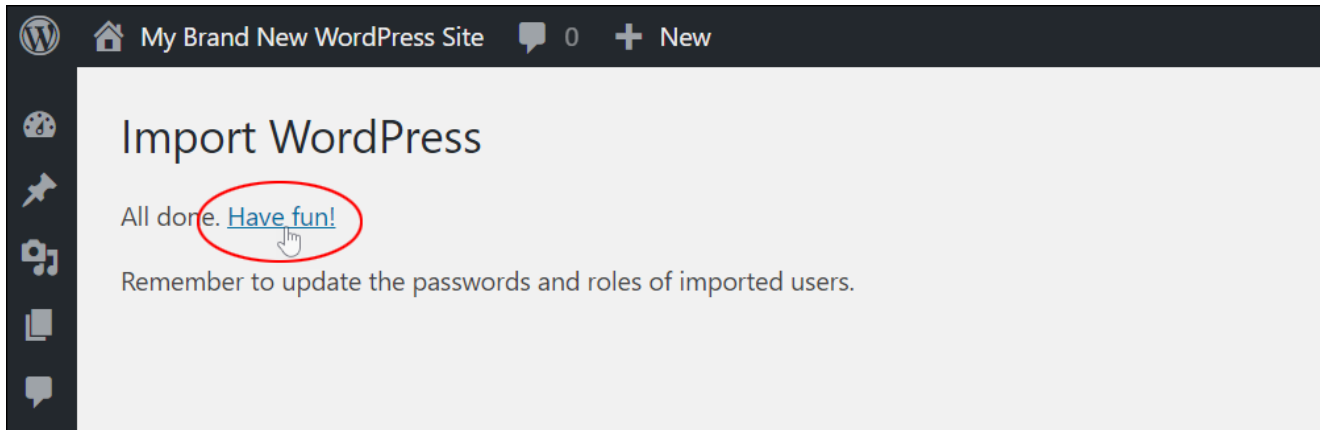

Import WordPress

Failed to create new user for Eula. Their posts will be attributed to the current user.
Failed to create new user for Martin. Their posts will be attributed to the current user.
Failed to create new user for Charlene. Their posts will be attributed to the current user.

WordPress does not import duplicate files.

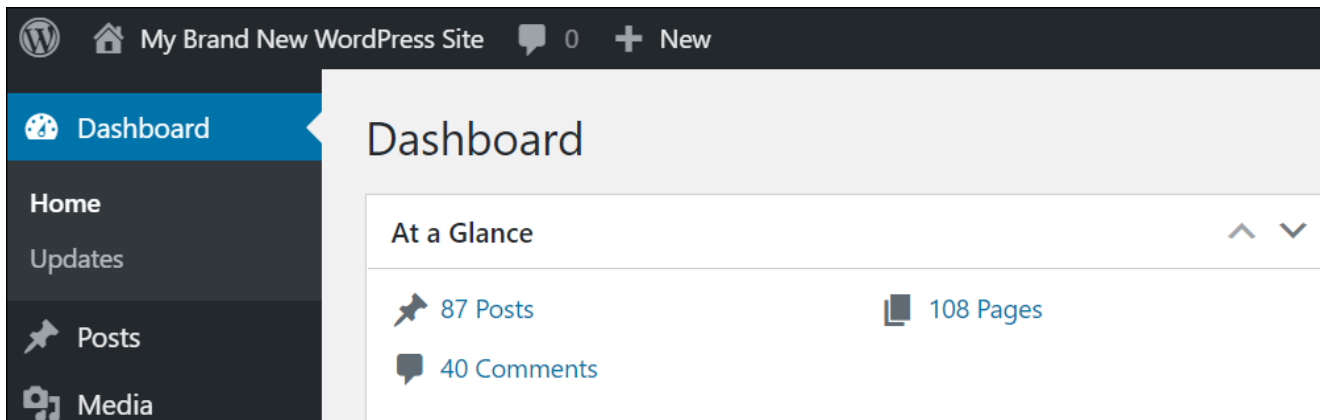

After the import process is complete, you can check the results of your import.

To do this, click on the link on the screen to return to the **[WordPress dashboard](#)**.

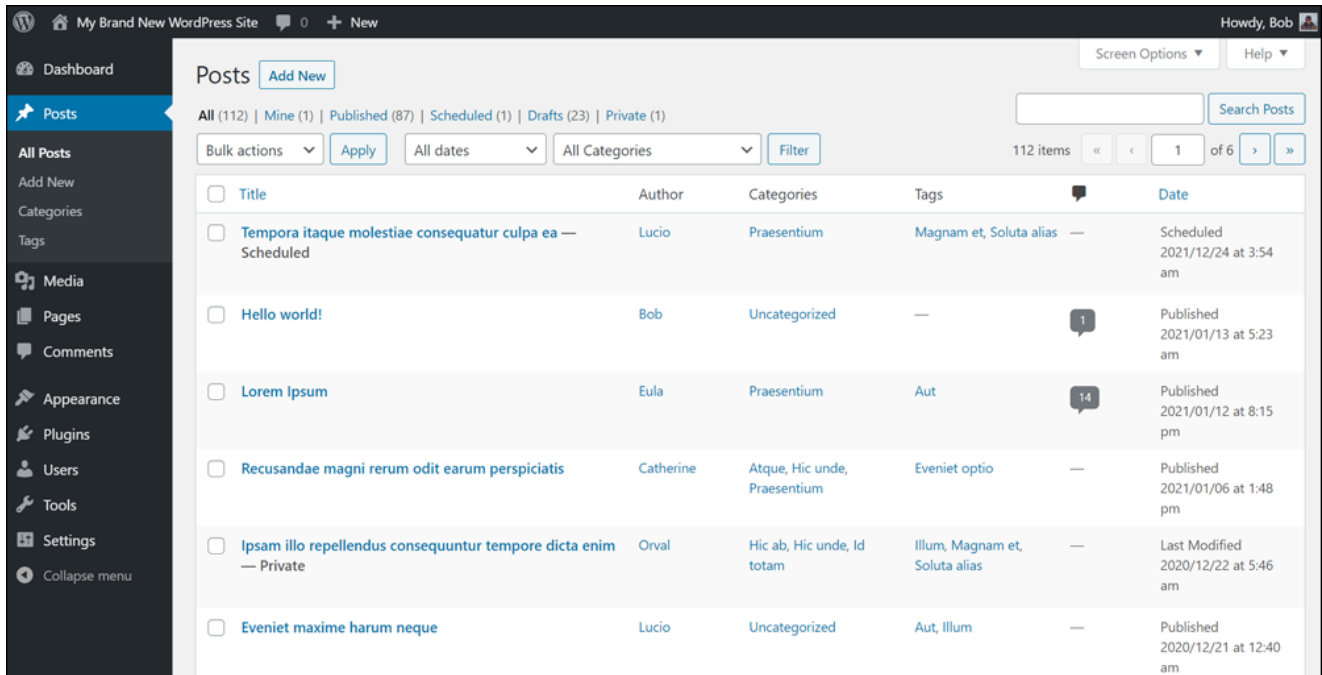

Click on the link to return to your Dashboard.

You can see how many content items have been added to your new WordPress site in the dashboard 'At a Glance' section.

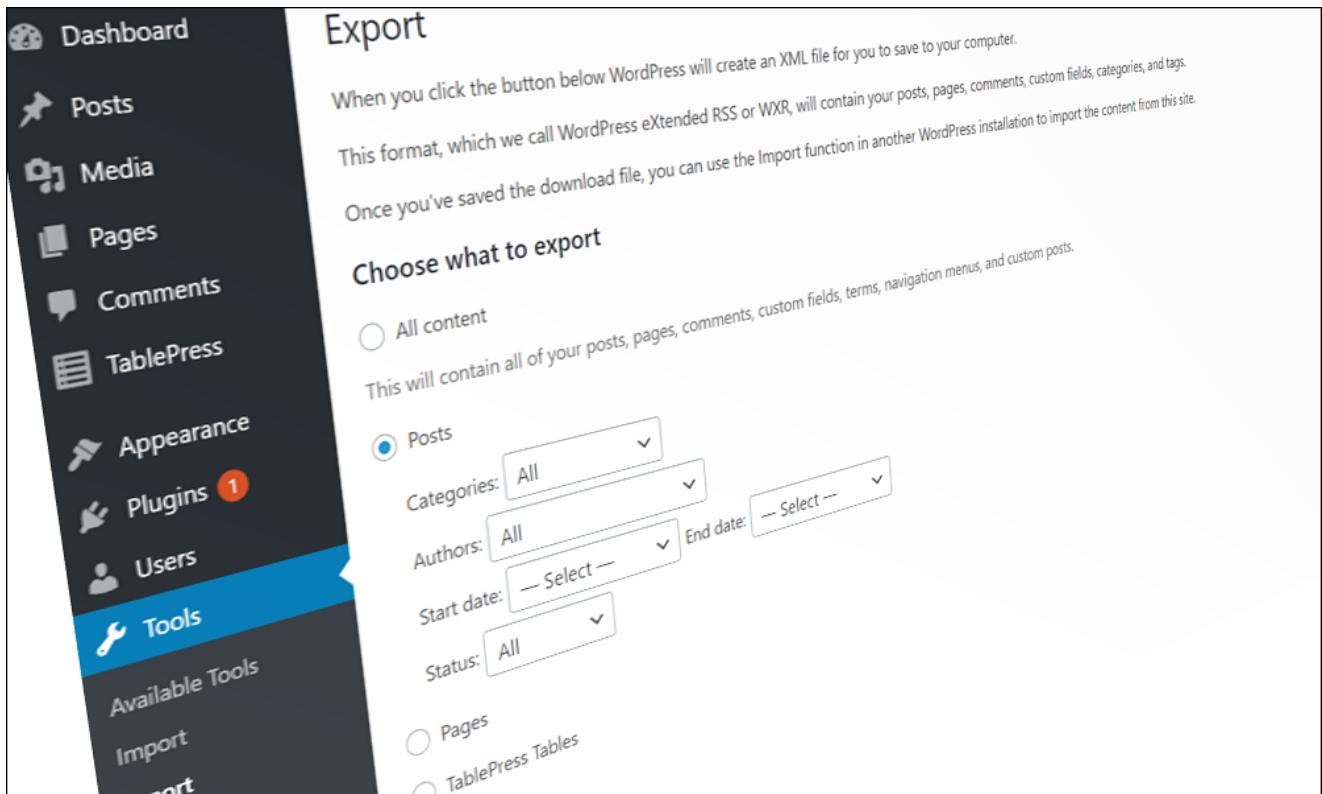

Check the At a Glance section to see how many content items are on your site.

As a final check, we recommend visiting different areas of your site's admin section (e.g. posts, pages, comments, tags, categories, etc.) to view and inspect the imported content.

Browse different sections of your site to inspect your newly imported content.

Congratulations! Now you know how to use the WordPress Tools menu to export and import content from and to your site.

The WordPress Tools section.
